

Evaporation Spray Systems

The Evaporation Spray System provides automated regular wetting of the ground surface to maximise evaporation while minimising infiltration. The amount of water evaporated is similar to the sites pan evaporation rate.

Benefits

- Low running cost
- No operational labour requirement
- Easy to determine water disposal volume
- Easy integration with mine systems
- Can be easily extended or modified

Please contact us for a quote or further details:

Features

- Fully automated operation
- Can use most water types
- PLC based control system
 - Fully customisable
 - Can use site standard PLC brands & models
- Single 4 core cable controls complete system
- Control system uses Extra Low Voltage
- Unlimited system size
- Wireless or GSM pump control
- Mining grade sprinklers and valves

Options

- Weather Station based automatic program adjustment
- Integration with site Citect or SCADA systems
- Solar powered control system
- Web based reporting
- SMS reporting notification and control
