

Hi-FOAM

FOAMING DUST SUPPRESSANT

WHAT IS HI-FOAM

Hi-FOAM is used to convert water and air into foam. **Hi-FOAM** creates dry, stable, small-bubbled foam with a consistency similar to shaving cream. **Hi-FOAM** is made primarily of high foaming surfactants with added wetting and binding agents.

SOLUTION

Hi-FOAM's unique dust suppressing foaming formulation developed by **RST** is used for:

- Crushers
- Transfer points
- Blanket dust suppression
- Stackers
- Conveyor systems

HOW IT WORKS

Hi-FOAM functions similarly to liquid spray wet suppression, in that the foamed liquid wets and agglomerates fine particles. The advantages of foam over liquid sprays are improved liquid coverage resulting in lower liquid feed rates and improved fine particle capture which greatly reduces dust levels.

Hi-FOAM increases the dust suppressing qualities of water by approximately 8 times.

PERFORMANCE

Improved liquid coverage over the material being treated is achieved by the large increase in liquid surface area of the water created by **Hi-FOAM**. Approximately 1 litre of water injected with **Hi-FOAM** will control dust on material that previously required 8 litres of water to achieve the desired result.

A unique property of **Hi-FOAM** is its ability to **'blanket' a mass of material** thereby forming a physical barrier against the dispersion of dust. A properly applied foam barrier stops all dust particles getting airborne and is the preferred method for trapping the fine particles before they get airborne.

APPLICATION

Hi-FOAM is used primarily for bulk dust suppression applications. The most common are feed locations at material transfer points and crushing operations. The use of **Hi-FOAM** is advantageous as a way of reducing dust whilst adding minimal moisture to the material ensuring optimum crusher, screening and transfer performance is achieved.

Hi-FOAM is applied through purpose designed spray systems as well as through systems that

are currently installed. **RST** will advise on any system modification requirements.

BENEFITS

- **Reduces Water Requirements**
- **Creates Blanket Effect**
- **Minimal Added Moisture**
- **Non hazardous**

EDUCATION AND TRAINING

RST provide experienced and trained site technicians to assist with product applications and procedures.

ENVIRONMENT

RST products are made in Australia under the strict guidelines and standards governing environmental regulations.
